

equipped by EAVX

MAKES ANY BODY SMARTER

VX is a digital intelligence system that unites technologies to give drivers and fleet owners a single access point for managing and monitoring productivity, safety, power and serviceability for optimal operation and insights on and away from the vehicle.

IMPROVED DRIVER & OPERATOR EFFICIENCY

VX Control augments the driver's situational awareness and provides automated control to streamline vehicle functions – promoting safety, efficiency and productivity.

FUNCTIONALITY OPTIONS

Controlling and information status for components such as lighting, locks, cameras, battery capacity, secured tools, preventative maintenance, route optimization and vehicle indicators combined into a single source digital screen.

CONNECTIVITY

The ability to communicate real time information between vehicles and to central fleet operations.

INCREASED INFORMATION/ REDUCED DISTRACTION

Simplification and consolidation of information into a single digital screen.

SMART AND REDUCED WIRING

Digital design creating efficiencies to reduce weight, over wiring and diagnoses.

RETURN ON INVESTMENT (ROI)

Combining capabilities and efficiencies within the body upfit, to reduce operational cost and increase uptime.

INCREASED FLEXIBILITY

Regardless of chassis or powertrain, the VX Control digital infrastructure connects and commands the widest array of technologies to deliver added functionality in safety and automation.

STREAMLINED INTEGRATION

Solutions based integration of safety, security, prevention and alternative ePTO power features, designed for installation at upfit.

JB POINDEXTER & CO

LEARN MORE ABOUT

Masterack upfit equipped with 

VX offers three packages designed to elevate your fleet's performance by enhancing productivity, safety, power and serviceability.

Increase operator visibility and reduce damage and threat

A Status Sensing

- Folding table sensing
- Remote status of ladder deployment

B Lighting Controls

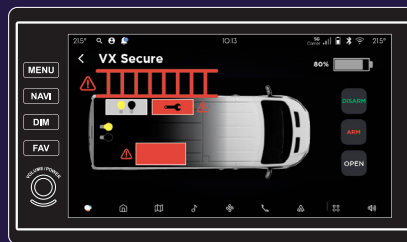

- Worksite lighting & storage illumination
- General cargo lighting

C Exterior Camera

- On-screen live surveillance

Automate monitoring and access management of stored tools

D Asset Management

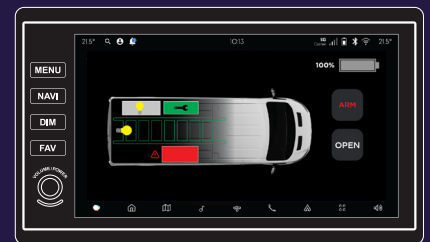

- Status of ladder deployment: stowed / unstowed
- Authentication of toolbox unlatch & open with PIN required

E Door Armed Controls

- Door status indication
- Restricted access
- Alarm activated

Provide auxiliary power, sized and configured for mobile work

F Auxillary Power

- Workplace charging
- 4kWH, 120VAC, 2.4kW
- Energy efficiency

G VX Display with State of Battery Charge
